Subordination, which gives drawings in a project hierarchy. Drawings in a project hierarchy can contain only one top-level drawing (master drawing) or they can contain multiple drawings, called sub-drawings. Design-time table capability, which allows a drawing to automatically generate a document-wide table of contents (TOC) and a document-wide table of figures (T/F). Unit properties and advanced layout options. Other modules that come with AutoCAD Architecture include the following: Basics, which provides commands for customizing the default settings for tools and commands. Timelines, which provides timing and sequencing for large projects. BIM 360, which enables a representation of the model as BIM components in 360 degrees.
