Download for free directly from the official Google Play site:Pro Football Focus archives are a wonderful window into some of the NFL's most memorable seasons. Each season, it's a challenge to pick the best player from a given team. Most years, the numbers don't matter as much as the team's record. But in some years, the numbers can be a good cross-check. And PFF's archives have a wealth of information at our disposal this season. While this is not a full ranking, we've narrowed our list to the players who have topped their past position-adjusted metrics at an elite level. Let's take a look at the top few. We're starting with the top five, as the numbers have changed a great deal over the past several seasons. Here are the five best players over the last three seasons (min. 1,000 snaps): 1. Aaron Donald, DT, Rams 2. Jadeveon Clowney, DE, Texans 3. Johnny Manziel, QB, Browns 4. Patrick Mahomes, QB, Chiefs 5. Von Miller, OLB, Broncos To be clear, this is based on point differentials (based on our averages), not wins and losses. But there are a couple of ways to look at it. In five of the last six seasons, one of the five players who topped PFF's rankings missed the playoffs. In the six seasons prior to that, only two of the five did. So, for example, Aaron Donald missed the playoffs in 2016 and 2017, but both of those years earned him the top spot. He also missed the playoffs in 2016, but stayed ranked at No. 1. Even more striking is the fact that the only other player in the top five to make a trip to the postseason was Von Miller, who fell short in 2016. To contextualize it further, no player in the top three made it to the postseason in the past four years. That's right -- in the last four years, three of the top five quarterbacks missed the playoffs. Manziel was the only one to make it past the first round, where he ended up losing to the Seahawks. But his numbers were down across the board

From the photos that you have downloaded from Lensarium, you can view them in a slideshow view, or you can simply open the photo file directly. This application's most interesting feature is that, unlike other applications, you can edit photos and movies right from the app. You can remove, crop, adjust colors, brightness, contrast, fade and a hundred other features. Besides this, the app is very useful because it can automatically download photos from Lensarium and can sort photos by date. This all, and more, would be good enough to make this the perfect photo slideshow app, but after using the app for a short time, you will surely discover the following shortcomings: First, the app seems to have a misbehavior. When you connect your phone or tablet to the PC, you can see photos on the PC, but when you open them using the app, there are no photos. This is probably because the app has to copy all the downloaded photos from the phone, and the app can only do that when it is connected to the PC. The second issue is that after connecting your device to the PC, you have to reconnect it to the phone to use the app. This can be really annoying because sometimes you just want to use the app. The third thing is that to make the photos appear on the PC, you have to delete them from the phone.
