I am setting up a dev environment for some of my projects. I am using Windows Server as a virtual machine on my local machine (I run Windows 10 on a laptop). I have a project with a local Git repository, which contains files that are being updated by the dev team. I setup a second virtual Windows server, which is acting as the "master" server, but this is just for the master of the application (i.e. it will be the master when the application is deployed). Should my git repository be

on this virtual machine, or is it just for master and a local branch of the project? I am familiar with the "git clone" and "git pull" commands, but I am not sure if this " 3da54e8ca3
