### What's New in the Modem Remote Control?

Remote Control for Hauwei MT882 Modem Device gives you the ability to completely manage every feature of your Hauwei MT882 modem device. You can reboot the modem, turn on/off the PPPoE server, turn on/off the WAN link, power up the modem, power down the modem, reboot the modem, change the wireless channel, edit the modem configuration and more. Your device is connected to the Internet and will have an IP address. Key features: \* Power on/off the modem \* Power on/off the PPPoE server \* Power on/off the WAN link \* Reboot the modem \* Change the modem configuration \* Reboot the modem

So lets start with the Basics. Technical Details The modem will be switched ON by default but when an ethernet cable is connected to it you will be asked to select "Remote Control" (may need to open the modem to see this). A new window will open and this can now be configured. General Setting \* Rename the modem to something descriptive or leave it as default \* The name is the name that will appear in the list of items in the network settings. \* Click "OK" to save and close. The modem device is now ready to be controlled. Access Point \* Check if the IP address assigned to the modem is the same as the IP address that is configured in the modem configuration \* Click on the "Access Point" link in the upper right hand corner and follow the instructions. A new window will open with a list of the links available on the modem Click "Select" to bring up the new window. Modem settings are now displayed. Configuration \* Click "Modem" to bring up the settings page for the modem \* The "Modem Configuration" section will show the following. \* In the "IP Configuration" section click on the "Add" button \* Enter the IP address and the netmask \* The IP address can be found under the "General Settings" link \* The netmask can be found under the "General Settings" link \* Click "OK" to save and close. Now that the IP address has been configured lets make the ethernet settings. \* In the "Ethernet Configuration" section click on the "Add" button \* Enter the IP address and the netmask \* The IP address can be found under the "General Settings" link \* The netmask can be found under the "General Settings" link \* Click "OK" to save and close. WAN \* Click on the "WAN" link \* In the "WAN Configuration" section click on the "Add" button \* Enter the IP address and the netmask \* The IP address
