If you want to learn how to use Photoshop, check out one of the many free tutorials offered on the web at www.tutorialsplanet.com. Learning Photoshop is a lot like learning a new programming language. Like any new language, you need to pick it up and start using it. To avoid being too complicated, you can start simple and work your way up the learning curve. If you are a graphic designer, you need to start with a simple project: make a background for a flyer, letterhead, website, or advertisement. Making and editing a background is the perfect way to learn the basics of a graphics editor. If you are a photographer, you can start by taking pictures and making a simple image editing project, like cropping and straightening a picture. After you master these small projects, go on to more complex ones. If you are in any other profession, for example, an author or a copywriter, finding a simple project that you can realistically complete in a short period of time is a good place to start. Always start with a simple project to focus on the basics. For a graphic designer, a simple project is an advertisement or a poster for a business or a charity. It should not be difficult for you to complete, and you can start learning the software as you work on it. For a photographer, a simple project is a picture of a model in profile. For example, if you create a print ad for a business, you can use your picture of the person to make a background for the advertisement. Then you can use the same image for the letterhead and other correspondence. If you plan to do more work in Photoshop, try to complete a simple project first, such as cropping and straightening a picture of your baby or other kid, and then create a simple background. This is a perfect way to get the fundamentals down, and it will give you a sense of how the software works. When you have a simple project, you can work to create a picture by cutting out elements or manipulating the image. If the person you photograph is a female, make sure you make a version of the photo with a model release form. You can then use the image in more than one project — if you use a business, you can display the image on the website and make copies for letterhead, print ads, and more. Getting

Apple on Wednesday released its iOS 10 beta 2 update for developers, today adding features like Messages in iCloud, new mail apps for iPad and iPad mini, a reorganized Home app, and more. As with the previous developer-only beta, the new beta 2 release of iOS 10 features a new version of iTunes to handle iCloud and Messages in iCloud. Messages in iCloud is a service that aims to make sure you always have access to messages in every device you use. As long as there's an internet connection, you can even read emails and send new messages and hangouts on your Mac, iPad, or iPhone without ever having to download messages. In iOS 10's beta 2, you can opt out of the Messages in iCloud feature in the iCloud control center. Today's update also adds a new mail app for the iPad and iPad mini, which is designed for long email compositions. According to Apple, the iOS 10 mail app now uses iOS 9's font and line break conventions. iOS 10 beta 2 also includes an updated Home app for iOS 9. The app now has a new three-button navigation bar on the iPad and iPad mini that lets you quickly access Home, as well as a dedicated three-column view of apps that's similar to the feature in macOS Sierra. Along with the regular features of an iOS update, like more Messages, Handoff, and Wallet, Apple has also added more stability improvements. Apple also continues to recommend that developers use the iTunes and iOS 9.2 update rather than the iOS 9.3 update released last month. This invention is related to an apparatus for continuously producing graft copolymers by polymerizing monomer in the presence of cross-linking agents. More particularly, the invention pertains to a nozzle based system which will enable the fabrication of stable, free-flowing polymer and copolymer particles. In the art of producing graft copolymers, a variety of methods have been used to make polymer particles ranging in size from millimeter-sized (approximately 0.04.mu.m) to micron-sized (approximately 10.mu.m). For example, it has been generally known that mechanical entanglement of polymer particles can be used to make millimeter-sized or larger particles of polymers (see e.g., U.S. Pat. No. 4,243,550). In addition, it is well known to produce polymer particles by grinding polymer particles larger than the mill

Clinical outcomes of patients with advanced renal cell carcinoma treated with axitinib after cytokine therapy. There have been few reports about the efficacy of axitinib after cytokine therapy in patients with advanced renal cell carcinoma (RCC). The purpose of this study is to retrospectively evaluate the efficacy and safety of axitinib therapy after cytokine therapy in these patients. From our Institutional Review Board approved database we identified 22 patients who had received axitinib therapy after cytokine therapy for advanced RCC. Patient characteristics, response and survival data, and adverse events were reviewed. Twenty patients (91.7%) had renal clear cell carcinoma and 2 (9.1%) had chromophobe RCC. Three patients (13.6%) had received prior cytokine therapy, and 19 (86.3%) had no prior treatment. The patient characteristics were similar between the two groups except for the number of metastatic sites. The objective response rate was 9.1%, disease control rate was 63.6%, and median progression-free survival (PFS) was 2.7 months. All responses and disease control were observed with 7.7 months of median overall survival (OS). The most common adverse events were myelosuppression and hand-foot syndrome. There was no significant difference in overall response rate and median OS between patients who received cytokine therapy alone and those who had previously received cytokine therapy. Patients who received axitinib after cytokine therapy had a higher PFS and OS than patients treated with cytokine alone (p = 0.03). These results suggest that axitinib is a potential therapy in patients with advanced RCC who have had prior cytokine therapy.load('services.xml'); \$container = new ContainerBuilder();
