

Whether you're facing a friend in EA SPORTS FIFA 17 Ultimate Team, online, or the coaches in the Pro Evolution Soccer series, this year, HyperMotion Technology drives the most realistic football motion in the game. FIFA is a great game that's always been focused on player intelligence, and the new physics engine makes a powerful case that this game is also the most realistic game of its kind. HyperMotion Technology brings FIFA to a whole new level. The Physics and Determination of Real Player Movement No matter what sport you play, one of the core attributes of the sport is that it requires absolute determination and skill. In most sports, the determination comes from having to decide to go for the right pass, while in others, the determination comes from the fine art of sprinting, diving and just being able to play a sport you've done and loved your whole life. FIFA is a great game. In FIFA you compete, you win, and you lose. Many factors can impact the outcome of a game, and ultimately it is the player's determination that drives them to succeed or fail. In the past games in the FIFA franchise, many players have tried to achieve realistic player movement while the rest of the game gets around it. By the time players think they've reached a new level of realism, other developers are already moving on. In past games, players of the FIFA series had to deal with the fact that the team's movements and player movement always felt pretty unrealistic. On purpose, they had to invent new movements in order to animate the player because sometimes a player just couldn't realistically lean a bit to the right. Having to imagine all of those new movements on top of the fact that real players have those extra bits of meat that makes them just a little bit bulkier, made things feel downright silly. Realism is the name of the game when it comes to sports games. Though the industry has moved on in many ways, sports games have always been about the singular drive that only comes from your team's character, determination and stamina. As a product of it's own history, EA Sports had to move forward and admit that real players, in real life, are not perfect little pinballs who simply have their movements re-animated in a way that minimizes the bulk. The magic of Hyper
