I want to mark each tuple as unique in python. How can I do it? For example: I have only two tuples: ('s', 'l'), ('e', 'A') unique should return [(0, 'l'), (1, 'A')]. A: Slightly simpler, than the other answer. >>> {tuple(i) for i in [('s', 'l'), ('e', 'A')]} {'s', 'l'}, ('e', 'A')} >>> unique = {tuple(i) for i in [('s', 'l'), ('e', 'A')]} >>> unique.keys() ['s', 'e'] >>> unique = {k:v for k,v in enumerate(unique,1) if k not in unique} >>> unique.update(unique) >>> unique {'s', 'l'}, ('e', 'A')} A case of anti-GQ1b-mediated hemolytic disease of the fetus and newborn: delayed molecular diagnosis and treatment. Anti-GQ1b is the most common antibody in the newborns with hyperbilirubinemia and has been reported to be associated with immediate bilirubin-mediated disease. However, it is rare for anti-GQ1b to cause delayed hemolytic disease of the fetus and newborn, with some reported cases of anti-GQ1b-mediated immune hydrops with no apparent bilirubin toxicity. We report a case of anti-GQ1b-mediated hydrops, wherein the anti-GQ1b type was not discovered until 3 weeks later. The use of IgG and IgM ELISA tests, anti-GQ1b-mediated inhibition assay and direct antiglobulin test were performed, but the result of first tests in this case were negative. In this case, fetoscopic cordocentesis was performed and a total of 1820 ml of blood was withdrawn, resulting in a massive drop in the serum bilirubin levels and subsequent avoidance of exchange blood transfusion. Anti-GQ1b is

Total shoulder arthroplasty has become an increasingly common procedure for the treatment of shoulder destruction. There are two predominant techniques: the tricortical and the reversed articulating. The former includes humeral attachment on the lateral humeral cortex and use of a single head (presently made from metal/polyethylene or ceramic). The latter includes humeral attachment on the medial humeral cortex and use of a paired head (presently made from polyethylene or ceramic). Both techniques have known complications. In this article, the authors present the comprehensive surgical technique for a universal humeral stemless shoulder arthroplasty. They detail the technique for preparation of the humerus, the subtleties in instrumentation, and the surgical approach for implantation. Although this surgery remains technically challenging, high standards of surgical technique and meticulous hemostasis can result in excellent clinical outcomes with a low complication rate.Q: What does the notation $\$ _ \rightarrow _$ mean? My textbook contains the notation $\$ _ \rightarrow _$ where nothing else is after it. I have seen it in the book but I have no idea what it means. I cannot find an answer in Google, nor in the rest of the book. A: It seems that this notation is given in the definition of finite product: Suppose that X , Y and Z are sets, and let \mathcal{F} denote the set of all functions $f \colon X \rightarrow Y$ such that there exists a function $f_0 \colon X \rightarrow Z$ such that $f(a) = f_0(a)$ for all $a \in X$; here we write $f = f_0$ to denote the desired function f which we want to associate with f_0 . Then define the function $\prod_{f \in \mathcal{F}} f \colon X \rightarrow Y$ as follows. $\prod_{f \in \mathcal{F}} f(x_0, x_1, x_2, \dots) = f(x_0)$ where x_0 is arbitrary, and if x_0, x_1, x_2, \dots

Spyware Prevention Tools: Sumsie Review: The last post focused on the sumsie review tool window showing a list of entries including names, paths, attribute values and more. There are some questions in that article that remain unanswered, namely a) How to remove the Last Update's column on the left and b) Why do I need to right click on the entry and pick 'View more' to view the rest of the information for an entry? It is a little strange to do the exact same things in two different tabs. The answers to these questions are in this post. This will take you through all the information you need for Spyware Information, spyware removal and malware removal in a step by step manner. 5.8 Spyware Information Sumsie allows you to see a variety of information regarding spyware and malware. In this area, there are numerous sections and tabs each filled with content. The tabs are placed in the corners of the window and when they are clicked, they display a window related to that tab in the center of the window. There are many sections of information in this tab. There is the spyware information in the upper right corner of the window. This displays the virus information and the malware information. As you look at the various tabs, you will see that each section has a different color. Click on the tab heading and see what this specific tab shows. Let's take a look at a few of the tabs in this section. Infected file Windows Explorer This section displays all the different types of spyware in your computer including file extensions that are infected. Simply right click on an infected file in Windows Explorer and select View info. If you don't see the section in Sumsie, right click on one of the files and select open in Sumsie, then restart Sumsie and you will see these infected files. Group Metadata Each group of malware has different metadata. This includes one or more of these columns:Group Name and Details. This is the name you see when you right click on the group. Has Malware in This Group? If a file or folder has malware in it, then this column will be red.This would indicate that the malware is found in the file or folder that this is selecting. A good example of this is checking if Outlook is infected. If the group is Outlook, and the Outlook icon is red, this tells you that
