Soft RestaurantÂ .The Immobilized Pyrogallol Reducer in a Second-Generation Arylimidazole Selector: Rapid and Efficient Synthesis of 2,3-Diarylquinoxalines. A new strategy for arylimidazole-based arylamine reductases which is inspired by the immobilization of the reductant pyrogallol in the active site of the reductases is described. This approach represents an alternative route to the synthesis of 2,3-diarylquinoxalines via the use of the new imidazole-tethered arylimidazole, 2-methylimidazole-4-carboxylic acid. The reducibility and selectivity of this substrate are comparable to those of the classical arylimidazole substrates. Due to the advantages of the use of an immobilized reductant, this methodology was also applied to the synthesis of 1,3-indandione derivatives. Under a mild reaction conditions and with a highly active reductant, this protocol avoids the use of sensitive thiols and offers a quicker, cleaner, and more environmentally friendly procedure to access novel derivatives. dada_audio_open() and dada_audio_close() * @io 6d1f23a050
