I am trying to figure out if the really cheap RF remote controllers (about 100 EUR in Germany) work with an AT (Attiny) Transistor. A: Yes, they can. The basic idea is that the internal oscillator circuit can be tuned with an external one. There's quite a bit of information online about the process. It requires a bit of PCB tweaking as it's done with a two-valued pot (to set up a certain range of frequencies) and a switch to disconnect the oscillator circuit (for testing purpose). simulate this circuit - Schematic created using CircuitLab The transmitter is a bit complex to build, because you need an 8-bit DAC to produce any kind of unique signal, but it could be an interesting project if you want to learn more about the RF transmitters and receivers. Germline cloning of translocation breakpoints by Southern blotting. Cloning translocation breakpoints is one of the most challenging tasks in basic genetic investigations. As of 2002, the technique that yielded the first informative recombination event was still being used in many laboratories. We have developed a new method that provides a DNA probe directly by screening the complex pool of bacterial clones derived from the translocation breakpoints. A chromosomal segment from one of the translocation partners was amplified by PCR using primers flanking the 3' region of a breakpoint. In parallel, a
