the quality of tcm products as described in the european pharmacopoeia and chinese pharmacopoeia are compared. commonly used tcm active compounds, such as saponins, flavonoids, iridoid glycosides and phenolic acids, are listed in table 1. each of these active compounds has its own information in the european pharmacopoeia and chinese pharmacopoeia. as mentioned above, the general monograph in the european pharmacopoeia specifies a general requirement for heavy metals, but no specific limits for the content of mercury, arsenic or lead are given. mercury has been detected in some tcm products [ 14 - 16 ], but to our knowledge, arsenic and lead have not been reported to be present in tcm products. meanwhile, heavy metals are also contained in the raw materials, and should be taken into consideration when evaluating tcm products. toxicity of arsenic and lead may also cause medical incidents if not monitored. no information about the toxicity of heavy metals is given in the monographs of tcm, and therefore, the content of arsenic and lead should be regularly monitored in the quality control of tcm. in europe, pharmaceutical guidelines and standards have been defined for antimicrobial evaluation of pharmaceutical products. these standards are defined by the world health organization (who), the united states food and drug administration, and the european medicines agency (ema). the european pharmacopoeia (ph. eur.) is the major european pharmacopoeial monograph for medicinal products. ph. monographs are in addition to pharmacopoeias, such as the united states pharmacopoeia (usp), the japanese pharmacopoeia (jp), and the british pharmacopoeia (bp).

## European Pharmacopoeia 8.0 Pdf Download

The principles of applying of the Pharmacopoeia provisions in Poland are stipulated in Article 25 of the Pharmaceutical Law Act of 6 September, 2001 (Journal of Laws of 2008, No. 45, item 271 as amended). Paragraph 1 of this Article recommends the use of the European Pharmacopoeia or translation thereof into the Polish language included in the Polish Pharmacopoeia; Paragraph 2 specifies, inter alia, application of the Polish Pharmacopoeia requirements in the scope of monographs having no equivalents in the Ph. Eur. Standards for preservative effectiveness are set forth in the European Pharmacopoeia (EP) [ 11 ], including both EP-A and EP-B criteria for antimicrobial activity, and in the United States Pharmacopoeia (USP) [ 12 ] and the Japanese Pharmacopoeia (JP) [ 13 ]. These recognized standards were used as comparative assessment measures in this work. The EP (edition 6.6, chapter 5.1.3) [ 11 ] test for efficacy of antimicrobial preservation of ophthalmic preparations using the EP-A evaluation criteria for antimicrobial activity is widely recognized for evaluating preservative effectiveness in pharmaceutical products marketed in EP member states. The EP-A evaluation demands two early sampling time points (6 and 24 hours) not required by either the USP (chapter 51) [ 12 ] or the JP (general information chapter 19) [ 13 ], therefore representing the most stringent of the three major compendia. The EP-B criteria are reserved for justified cases where criteria A cannot be attained, such as products that would be of increased risk of adverse events. 5ec8ef588b
